

DIVISION BUMP!

Each player will start with 10 counters. Players will then take turns rolling a 6-sided die and solving one of the division problems in this row. If the problem is solved correctly, the player may cover this square with their counter.

But Wait!
If all the squares in a row are taken, you can BUMP another player off their square, and place your counter there instead. Only squares that have 2 of a player's counters are safe. These cannot be bumped. The winner of the game is the person who has no counters left.

DIVISION BUMP!

Each player will start with 10 counters. Roll a 6-sided die and solve one problem. If the problem is solved correctly, place your counter on the square with that number.

If all the squares in a row are taken, roll your die again. If you roll a 2 or 5, bump your opponent's counters off their square, and place your counter on that square. The winner of the game is the person with the most counters.
